ROQOS, THE FIRST-EVER CLOUD-BASED WI-FI ROUTER SERVICE, LAUNCHES ONLINE, OFFERING HOME USERS PEACE OF MIND AND SENSE OF CONTROL OVER THEIR NETWORKS

Users are provided with affordable parental controls, cybersecurity, easy networking and customer support

Tysons, VA – Aug. 16, 2016 – Roqos, the first cloud-based service company that provides cybersecurity, parental controls and easy home networking to the residential market, has launched today. Roqos Core, which comes with the service, is a high performance Wi-Fi router controlled by accompanying Roqos app. Through Roqos service, consumers are supplied with continuous updates to ward off hackers and intrusive online content.

“We are proud to be the first service company for the residential market to offer advanced cybersecurity and parental control features with the enterprise-grade Roqos Core Wi-Fi router,” said Sezen Uysal, founder and CEO of Roqos. “In the ever-changing landscape of the web, we give families peace of mind that they are protected from even the latest attacks on the internet.”

Roqos ensures the strongest internet connection and shields against online threats. Essential to the subscription-based service is Roqos Core, a high performance Wi-Fi router with advanced cybersecurity and parental control features, as well as cloud-based management accessible by Roqos app and web browser.

Main features include:

- **Parental Controls:** Parents now have an all-in-one service to outsmart their children’s smart devices. From anywhere in the world they can set predetermined filters to limit access to specific websites or games and to a particular weekly schedule, such as dinner time, bedtime or more.
- **Affordable cybersecurity protection:** Competitively priced for all budgets, the enterprise-grade cybersecurity is automatically and continuously updated. It blankets users’ internet experiences with the fiercest defense against potentially harmful software, viruses, attacks and advertisements coming from the internet.
- **Easy networking and setup:** Even the most beginner users are empowered by Roqos. Getting started takes just two minutes and only requires the Roqos app. Once activated, Roqos constantly scans the home network and notifies users of connected devices with detailed information.
